

PART 2 – TRUST INTELLIGENCE & GROWTH OPTIMIZATION LAYER (30%)

This layer enhances safety, matching quality, and platform growth.

13. Trust & Safety Intelligence Engine

13.1 Reliability Score

Each user receives a dynamic Reliability Score (0–100).

Calculated using:

Ride completion rate – 40%

Cancellation frequency – 25%

Rating average – 25%

Response time – 10%

Displayed as:

Low

Moderate

High Reliability

13.2 Cancellation Risk Detection

If:

User cancels > 3 rides in 30 days

Low response rate

Frequent last-minute cancellations

System:

Flags profile

Reduces ranking priority

Warns user

13.3 Fraud & Spam Detection (Basic Rules)

Multiple identical ride posts

Suspicious pricing patterns

Repeated cancellations

Admin flagged for review.

14. Smart Ride Recommendation Engine

When passenger logs in:

System recommends rides based on:

Previous searches

Saved routes

Frequently traveled cities

Upcoming travel patterns

Example:

“You often travel Delhi → Jaipur. 5 rides available this weekend.”

15. Dynamic Price Intelligence (Basic Version)

System provides pricing guidance to drivers:

Compares:

Route distance

Average price on similar routes

Seat demand

Suggests:

“Recommended price range: ₹450–₹550”

Driver can override.

16. Matching Optimization Engine

If ride has low booking rate:

Suggest:

Adjust price

Add more details

Enable instant booking

Adjust departure time

Improves ride fill rate.

17. Growth & Engagement Engine

17.1 Referral System

Users get referral code

Bonus credits for completed trips

17.2 Saved Routes & Alerts

Passenger can save route

If matching ride posted:

→ Automatic notification

17.3 Ride Frequency Analytics (Internal)

Track:

Popular routes

Peak travel days

High-demand corridors

Used for future optimization.

18. Commission & Monetization Logic

Revenue Model:

Service fee per booking (5–15%)

Premium visibility for drivers

Instant confirmation badge subscription

Insurance partnerships (future)
